EPTA STAGE 0 DISC

EPTA disc floatation mechanism, with Grooves with ventilation holes for better cooling of interface zone

- . Thickness 5,8 mm
- . Optimized lightening holes to avoid vibration onset
- . Machined straight crests for thermal dissipation. These crests act as radiators, dispersing more heat without being in contact with the pads. As a result, maximum temperature of the disc under extreme thermal loads decreases by up to 40 °C

ROTOR IN STAINLESS STEEL
INDUCTION HARDENED
HUB IN ALUMINIUM AL7075 hard anodized (30µm)
